SUMMARY

Computer Science graduate (Distinction, RMIT) specialising in AI engineering and full-stack development. Builds and deploys production AI systems using the OpenAI Agents SDK and Model Context Protocol (MCP), with experience across Python, TypeScript, React, and PostgreSQL. Shipped a multi-agent financial analysis platform and an agentic AI service to production. Fluent in English and Spanish.

EDUCATION

RMIT University — Bachelor of Computer Science with Distinction

Jan 2023 – Dec 2025

Minor in Artificial Intelligence and Machine Learning

TECHNICAL SKILLS

AI Engineering: OpenAI Agents SDK, Model Context Protocol (MCP), FastMCP, multi-agent systems, prompt engineering, structured outputs (Pydantic)

Languages: Python, TypeScript, JavaScript, SQL

Frontend: React, Next.js, TanStack (Start/Router/Query), Tailwind CSS, shadcn/ui, Zod, Vite, Framer Motion

Backend: FastAPI, Pydantic, NestJS, Node.js, REST APIs, JWT Authentication, Argon2

Data & Infrastructure: PostgreSQL, Prisma, Neon, Docker, Fly.io, Vercel, Cloudinary

Tooling: Git, GitHub

EXPERIENCE

Freelance Software Engineer — Olways Pets

Jan 2026 – Present

- Designed and built a full-stack platform managing ~500 artwork assets, testimonials, and customer enquiries for a commission-based business.
- Modelled the relational schema in PostgreSQL and exposed it through a NestJS REST API, separating public catalogue endpoints from authenticated admin operations.
- Secured the admin panel with JWT authentication and Argon2 password hashing, isolating administrative workflows from public-facing routes.
- Integrated Cloudinary for image storage and delivery, using URL-based transformations for dynamic resizing and compression, reducing backend load, and improving frontend performance.

Software Engineer Intern — Musical Moon

Jan 2025 – May 2025

- Collaborated with the team to design and ship an order-history feature end-to-end across the web (Next.js) and mobile (Expo), from database schema to polished UI.
- Built and maintained the order-history microservice, handling order data flow between web and mobile clients.
- Containerised the service with Docker, improving environment consistency and developer onboarding.

Hardware Technician — PLE Computers

Jun 2021 – Jan 2024

- Assembled custom-build PCs to customer specifications and diagnosed hardware faults across consumer and enterprise systems, applying firmware updates to ensure compatibility and stability.

PROJECTS

Vestly — github.com/Riiiviii/vestly • vestly-nine.vercel.app

- Built and deployed a multi-agent financial analysis platform where four specialist agents (Fundamentals, Sentiment, Risk, Competition) execute in parallel and a Judge agent synthesizes their findings into an evidence-grounded investment thesis. FastAPI on Fly.io, React (Vite) on Vercel.
- Architected the agents on the OpenAI Agents SDK with Pydantic-validated structured outputs, building each panel agent on a shared AnalysisAgent base class and a research-pack data layer drawn from yfinance and Finnhub.
- Gave the Competition agent its own MCP server (FastMCP over stdio) exposing peer-lookup and research-pack tools, so the agent autonomously selects 2–3 relevant competitors via Finnhub and fetches comparison data on demand, turning a single-company analysis into a grounded competitive one.

AI Portfolio Chatbot — github.com/Riiiviii/ai-chatbot • riven-portfolio-api.fly.dev/docs

- Built and deployed an agentic AI service that answers questions about my professional background using the OpenAI Agents SDK and a custom FastMCP server exposing seven structured tools.
- Designed a production deployment architecture that packages the FastAPI application and FastMCP server into a single Fly.io deployment, using Pydantic-validated schemas and structured error handling to improve reliability.
