SUMMARY

Computer Science graduate with Distinction from RMIT University targeting junior AI Engineer and full-stack software roles. Built and deployed Vestly, a production multi-agent financial analysis platform using OpenAI Agents SDK, MCP/FastMCP, FastAPI, React and PostgreSQL. Shipped REST APIs, authentication systems and tested backend services across internship, freelance and self-directed projects.

EDUCATION

RMIT University - Bachelor of Computer Science with Distinction

Jan 2023 – Dec 2025

Minor in Artificial Intelligence and Machine Learning

TECHNICAL SKILLS

AI Engineering: OpenAI Agents SDK, Model Context Protocol (MCP), FastMCP, Multi-Agent Systems, LLM Tool Calling, Pydantic, Structured Outputs

Languages: Python, TypeScript, JavaScript, SQL

Frontend: React, Next.js, TanStack, Tailwind CSS, shaden/ui, Zod

Backend: FastAPI, NestJS, Node.js, REST APIs, JWT, Argon2

Data & Infrastructure: PostgreSQL, Prisma, Docker, Fly.io, Vercel

Testing & Tooling: Jest, Pytest, Unit Testing, Linux, Git, GitHub

EXPERIENCE

Freelance Software Engineer - Olways Pets

Jan 2026 – Present

- Built a full-stack platform for a commissioned pet portrait business, replacing a static catalogue workflow with customer enquiry flows and admin-managed artwork/testimonial content.
- Modelled the PostgreSQL schema and built a NestJS backend with 23 REST API endpoints across authentication, image management, testimonials and contact submissions, separating public routes from authenticated admin operations.
- Implemented secure admin workflows using JWT guards, role-based access control, httpOnly access-token cookies and Argon2 password hashing.
- Integrated Cloudinary signed-upload endpoints and URL-based transformations for managed media uploads, dynamic resizing and compression, reducing backend load and improving frontend performance.

Software Engineer Intern - Musical Moon

Jan 2025 – May 2025

- Owned end-to-end delivery of an order-history feature across the Next.js web application and Expo mobile application, from database schema and backend service logic through to production-ready UI.
- Built and maintained the order-history microservice, producing 10 Jest unit tests covering CRUD operations, validation outputs, data flow and web/mobile integration assumptions.

Hardware Technician - PLE Computers

Jun 2021 – Jan 2024

- Diagnosed and resolved hardware, firmware, Linux and compatibility faults across consumer and enterprise systems under customer-facing time pressure.

PROJECTS

Vestly - GitHub: github.com/Riiiviii/vestly • **Demo:** vestly-nine.vercel.app

- Built and deployed a multi-agent financial analysis platform using FastAPI (Fly.io) and React (Vite, Vercel), where Fundamentals, Sentiment, Risk and Competition agents run in parallel and a Judge agent synthesises their findings into an evidence-grounded investment thesis.
- Architected the agent framework using the OpenAI Agents SDK, Pydantic-validated structured outputs and a shared AnalysisAgent base class, integrating 8 MCP tools across yFinance, Finnhub and competition research workflows.
- Produced 27 Pytest unit tests, including 15 tests for confidence-scoring edge cases and 12 tests for research-pack generation covering company summaries, snapshots, financials, price movement, news and full-pack creation.

AI Portfolio Assistant - GitHub: github.com/Riiiviii/ai-chatbot • **Live Demo:** rivenwahnich.dev

- Designed the portfolio assistant around structured tool calls rather than static prompt context, allowing the agent to retrieve targeted information about projects, experience and skills through eight FastMCP tools.
- Packaged the FastAPI application and FastMCP server into a single Fly.io deployment, using Pydantic-validated schemas, structured error handling and Dockerised service configuration for consistent production deployment.
